

AlgoWorld

Tinyman liquidity pool
AWT/USDC

algoworld.io

AWT liquidity pool

AlgoWorld Token liquidity pool

- A liquidity pool USDC/AWT will be created on Tinyman in order to provide the possibility to buy and sell AWT
- The goal is to have an initial pool between 100,000 to 200,000 AWT, with an introduction price of 1 AWT = 0.1 USDC. Each swap will then modify the price of AWT
- AlgoWorld will contribute 6,000 USDC to the pool
- Each member has the possibility to contribute to this pool and get rewarded!

AWT liquidity pool

AlgoWorld Token liquidity pool

- Direct contribution to the pool from AlgoWorld members
 - For every 1000 USDC sent to AlgoWorld, **500 USDC and 5000 AWT** will be sent to the pool by AlgoWorld, on your behalf.
 - The contributor will thus have his own part of the pool, with the possibility to withdraw his liquidity after 1 month. Additionally, for holding longer than 6 months without withdrawals, the contributor will get a **10% liquidity bonus** from AlgoWorld!
 - AlgoWorld will dedicate the 500 USDC left to the pool.

AWT liquidity pool

AlgoWorld Token liquidity pool

- Incentives :
 - Each contributor will **get a portion of the fees** collected on all swaps (0.25%)
 - As mentioned before, each contributor will have a **10% bonus on its contribution** after 6 months without withdrawing his part of the pool
- Maximum size of the initial pool: 200,000 AWT
- **WARNING:** As with value of any crypto assets, tokens or currencies, AWT can have periods of extreme volatility. This can consequently cause a lack of Algo liquidity, making it impossible to fully recover the Algo invested. **By contributing to the pool you are also confirming that you are well aware of risks associated with decentralised liquidity pools such as tinyman.org**
